

Pea Seed Treatment

on-farm network
PARTICIPATORY • PRECISE • PROACTIVE

Does seed treatment reduce seedling disease and/or insect damage and become economically beneficial? Find out!

Suggested Treatments

- 1) Fungicide, Insecticide or Fungicide+Insecticide
- 2) Untreated

Trial Design

- Follow a randomized layout
- Minimum four replicates
- Strips need to be at least as wide as one combine pass
- Strips should run the length of the field, excluding the headlands

Your Fields, Your Results

- Established with your equipment
- Under your management practices
- Harvested with your equipment
- MPSG support at establishment & harvest
- MPSG collects data throughout the season
- Results packaged together for you in a short report
- Must be a member in good standing

Headland

Treated	Untreated	Treated	Untreated	Untreated	Treated	Untreated	Treated	Treated	Untreated	Treated	Untreated
1	2	3	4	5	6	7	8	9	10	11	12
