

Manitoba Pulse & Soybean Growers On-Farm Network Soybean Seed Treatment

Objective

The purpose of this project is to quantify the agronomic and economic impacts of seed treatment on soybean production in alternating strips across the field

Brief Summary

- The farmer will plant 6 strips of treated seed alternating with 6 strips without seed treatment (untreated check)
- The width of the strip must be at least as wide as the combine pass, preferably wider and the length should be at least 1000 feet
- The alternating strips can be planted by using GPS to plant every other strip with one treatment and then filling in skipped passes with second treatment
- Harvesting must ensure at least one “pure” combine pass from each treatment (not mixing yields from two different treatments)

Rep 5	Seed Treatment
	Untreated Check
Rep 6	Seed Treatment
	Untreated Check

Farmer Requirements

- Accurately record where all treatments are applied, including the time of application, variety etc. and flag corners
- Areas containing waterways and headlands should be avoided. All other factors in the trial area must be managed the same (planting date, variety, crop protection, etc.)
- If possible, accurately record where all treatments were applied using GPS mapping equipment.
- Alert MPSG of expected harvest date and ensure all treatments are harvested on the same day with the rows into an MPSG weigh wagon
- If available, harvest with a calibrated yield monitor equipped with GPS
- Allow MPSG to use submitted and collected data for research, educational and informational purposes
- All participants must be a member in good standing with MPSG

MPSG Requirements

- Be available at seeding and harvesting
- Data collection throughout the growing season
- Collect an aerial image of the trial and supply to the farmer at no cost
- Provide a report analyzing the treatment differences after harvest
- Keep data in a confidential manner that can't be linked back to the individual farmer
- Make this **minimum work for farmers.**

Benefits to the Farmer

- Test production practices while being involved in the research process
- Access to latest research which can be adapted to their farm
- Creating a crop production database for your local area
