

Soybean Field Rolling Trial

Objective: To quantify the agronomic and economic impacts of field rolling on soybeans

Trial Summary

- Plant the following treatments the length of your field according to the example plot layout provided:
 - Field rolling
 - No rolling
- The width of each strip should be as wide as your combine pass

Farmer Requirements

- Manage the trial area the same as the rest of the field
- Harvest the strips using a provided weigh wagon to collect accurate yield data
- Allow the University of Manitoba and PAMI access to the field for data collection
- Be a member in good standing with MSPG

MPSG Requirements

- Provide research support by being available during trial set-up and harvest
- Collect data from the trial throughout the growing season
- Provide an aerial image of the trial at no cost
- Provide a report for your trial and a summary of similar trials
