Pea Fungicide

Will a fungicide application reduce disease pressure this year? Will the decision be economic? Find out!

Suggested Treatments*

- 1) Single application
- 2) Unsprayed

*Applied according to label rates/timing

Trial Design

- Follow a randomized layout
- Minimum four replicates
- Strips need to be at least as wide as one combine pass
- Strips should run the length of the field, excluding the headlands

Your Fields, Your Results

- Established with your equipment
- Under your management practices
- Harvested with your equipment
- MPSG support at establishment & harvest
- MPSG collects data throughout the season
- Results packaged together for you in a short report
- Must be a member in good standing

To participate in the trials, contact
