

Soybean Seeding Rate

on-farm network
PARTICIPATORY • PRECISE • PROACTIVE

Is reducing soybean seeding rate a viable cost saving decision for the farm? Find out!

Suggested Treatments*

- 1) Low seeding rate
- 2) Medium seeding rate
- 3) High seeding rate

**Min. 30,000 seeds/ac difference between treatments*

Trial Design

- Follow a randomized layout
- Minimum four replicates
- Strips need to be at least as wide as one combine pass
- Strips should run the length of the field, excluding the headlands

Your Fields, Your Results

- Established with your equipment
- Under your management practices
- Harvested with your equipment
- MSPG support at establishment & harvest
- MSPG collects data throughout the season
- Results packaged together for you in a short report
- Must be a member in good standing

Headland

Medium Rate	Low Rate	High Rate	Low Rate	High Rate	Medium Rate	Low Rate	Medium Rate	High Rate	Medium Rate	Low Rate	High Rate
1	2	3	4	5	6	7	8	9	10	11	12

Headland

Choose the rates that make the most sense for your farm!

Decision Making, Simplified
Your trial includes:

- ✓ Plant stand data
- ✓ Yield results
- ✓ Economics analysis

Your data, working for your farm
