

## SEEDED SOYBEAN ACRES 2000-2023

Charting Soybeans  
*in Manitoba*

**THIS GRAPH SERVES** as a crucial tool for Manitoba Pulse & Soybean Growers (MPSG) to understand the dynamics of soybean acres planted in the province over time. Analyzing the fluctuations in soybean acres allows us to prioritize your investments in research, extension, and market development.

This information helps us explain and be transparent with the management and governance decisions we make. For example, while acres still fluctuate, we've proposed moving our financial year-end from Dec 31 to July 31, allowing us to use seeded acreage reports from MASC to get a clearer picture of our revenue for the year and how that revenue is best allocated to serve our farmers.

This graph is part of our ongoing commitment to presenting information related to pulses and soybeans in easy-to-consume and clear formats. ■
